Know More About Turkizite

ORIGIN AND SUPPLY OF TURKIZITE

It is incredibly rare and can only be found in one place on Earth.

Comes from a remote mountain area in Anatolia, Turkey.

In the early 80's the gemstone was mined for commercial purposes.

The higher cost of the gemstone is attributed to its rarity.

It is not often found in the regular market or jewelry stores.

AN ANALOGY FOR THE TURKISH DELIGHT

The intensity of color changes depends on the size of the Turkizite.

The larger the stone, the more intense the color change.

Smaller stones will exhibit a subtle color change.

Pleochroism is the evident change in color which takes place as the gemstone is exposed to various wavelengths of light.

A single gemstone could present multiple hues: soft kiwi green, lavender-blue, or champagne pink to rich dark red.

It is one of the few color change gemstones in the world along with Sapphires, garnets and Alexandrite.

TURKIZITE BASICS

- **COLOR:** Light olive to green-yellow
- **FAMILY:** Diaspore
- **MOHS SCALE HARDNESS:** 6.5 - 7
- **LUSTER:** Vitreous
- **TRANSPARENCY:** Transparent to translucent
- 100% natural gemstone and undergoes no enhancements.
- Incredibly rare gemstone and only found in one place on Earth.

IS AAA GRADE VALUABLE, RARE?

Turkizite rough is not readily available.

A single-mine location and limited rough quality in MONOPOLIZED hands make turkizite rare.

AAA is even SCARCER when graded for quality.

AAA grade has exceptional refractive index and high luster.

It is quality-checked stringently, only then it passes QC.

Adding to this, bigger sizes are rare too for AAA grade.

Owing to its perfect cleavage, Turkizite can cleave easily.

Extra care should be taken when cutting, polishing and setting gems into jewelry.

Lapidary work very carefully throughout manufacturing to produce at least a minimum of AAA grade.

Turkizite Care

- While Turkizite is well-suited to everyday wear, avoid doing anything that risks impact, exposure to chemicals, heat or extreme temperature changes.
- Always store Turkizite carefully to avoid scuffs and scratches.
- Clean with gentle soap and lukewarm water, scrubbing behind the gem with a very soft toothbrush as necessary.
- After cleaning, rinse with lukewarm water and pat dry with a soft towel or chamois cloth. Never steam or ultrasonic clean your Turkizite.

A SHORT HISTORY OF DIASPORE AND ITS TRADE NAMES

Zultanite and Csarite are the trademarked names given to the best Quality color change Diaspore.

Best quality comes only from Turkey.

Diaspore from other locations cannot be called Zultanite or Csarite.

Diaspore was first discovered in 1801 in Russia.

The name Diaspore comes for the Greek word “diaspora” meaning to scatter.

Names because of the way the gemstone seemed to scatter the light and sparkle.

GEMSTONE FACETING CHALLENGES

ONLY expert lapidary cuts Turkizite.

If not cut wisely, the gem cannot pass QC and be graded as AAA.

Faceting and polishing this stone is difficult.

It is very-very labor intensive and needs very expert labor to draw out color change in the best manner.

It needs seasoned lapidary of years to work with turkizite.

YIELD OF TURKIZITE

Rough to ready yield varies between 5-10% depending on rough quality.

Inclusions, cleavages, brittleness and fissures can make cutting, setting and cleaning difficult.

Even for a skilled gem cutter, cutting Turkizite presents a challenge.

Diaspore has perfect cleavage in one direction.

It can be difficult to cut because parts of the stone will cleave off.

Lapidarist must be skilled to retain maximum carat weight and not include fractures, fissures.

Because of cleavages and brittleness, less than 2.5 mm sizes break easily leading to rejection of 80% material sometimes.

This all affects the yield greatly.

MINE ACCESSIBILITY

Mine is hidden in the remote areas.

Miners discover the gemstones while extracting bauxite.

They find the mineral by following a sizable underground vein of bauxite.

Bauxite is a very tough mineral, and the seams where turkizite is found are some 40 mts deep inside the hillside.

Only professionals can extract this gemstone.

For every 100 grams (500 carats), only 1% or 2% would be of gem quality.

Of all the rough screened at the mine over many years, only about 40% was suitable for cutting into faceted pcs.

IS IT EXPENSIVE?

No, when you consider its many benefits and rarity, it is remarkably affordable.

Limited supply + ever increasing demand = future prices increases.

Never been a better time to purchase turkizite.
